

# PRODUCT COMPARISON CHART

With the introduction of VersaCore panels in 2001, Fabcon nearly reinvented the precast panel category. We now offer even more choices to match the expanding needs of our customers. Our comprehensive manufacturing capabilities give you the ability to match thermal and structural performance to the specific needs of your project.

## VersaCore+green™ FABCON PRECAST

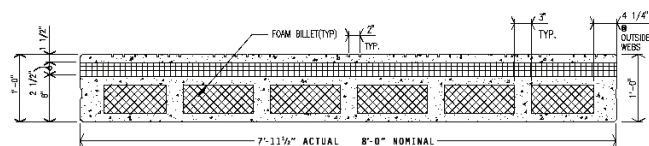

Max Height	Up to 65'	Panel Thickness	R-Values
Widths	20"–13'6"	8"	13.6
Sound Attenuation (STC)	50–51	8.5"	14.6
Concrete Strength	7,000–9,000 psi	10"	16.9
Recycled Content	Up to 58%	10.5"	17.9
Fire Rating	Up to 4 hours	12"	20.2

*VersaCore+Green is our standard panel. Packed with equal parts performance and value, VersaCore is an ideal precast panel solution when the additional thermal performance and cost of a sandwich panel is unnecessary.*

## VersaCore+green sandwich™ FABCON PRECAST

Max Height	Up to 65'
Widths	20"–13'6"
Sound Attenuation (STC)	52
R-Value	R-28.2
Concrete Strength	7,000–9,000 psi
Recycled Content	Up to 58%
Fire Rating	Up to 4 hours

*Our VersaCore+Green Sandwich panels provide outstanding thermal performance. Their continuous 2.5-inch layer of insulation increases the static R-value by as much as 250% over many construction methods including site-cast panels and CMU construction. Sandwich panels are the only standard panels that have a 4-hour fire rating.*
